## Q's for Your Doctor

# Wondering about treatment results?

### Ask your doctor:

- ☐ What is a B-cell treatment? How does KESIMPTA® work?
- ☐ Are there reasons to start treating right away?
- ☐ What kind of results should I be looking for?
- ☐ Are there any concerns between doses I should be aware of?
- ☐ Are there any reasons to start with a B-cell therapy?

# Treatment Administration

# What People Are Saying

**In a real-world survey,\*  
people taking KESIMPTA®:**

- found the Sensoready®  
Auto-injector Pen  
**EASY & SIMPLE TO USE**
- said monthly dosing was  
**CONVENIENT**

RMS, relapsing multiple sclerosis.

\*Real-world 30-question survey of 105 US patients (aged ≥18) diagnosed with RMS for 1+ years, who took KESIMPTA with the Sensoready® Pen within previous 12 months. On a scale of 1-5, 89.5% of patients rated it a 4 or 5 (5 being most positive) on overall ease of use and ease of monthly dosing schedule. Questionnaire not validated.

**Hear from others taking KESIMPTA**

## Important Safety Information (cont)

Tell your HCP right away if you have any infections or get any symptoms including painful and frequent urination, nasal congestion, runny nose, sore throat, fever, chills,

# Taking B-cell Treatments

There are factors to consider when it comes to treatment day.

KESIMPTA®	Other B-cell treatments*
Take it yourself	Administered by a health care provider
Take it at home or on the go	Taken in a medical facility, travel required
No premeds required†	Premeds recommended
No post-dose observation	Post-dose observation

\*B-cell treatments for RMS include: KESIMPTA, Ocrevus® (ocrelizumab), Ocrevus® Zunovo™ (ocrelizumab and hyaluronidase-ocsq), and Briumvi® (ublituximab-xiiy). This is not a complete list of all the available treatments for RMS. The comparison pertains only to differences in administration and should not be considered a comparison of efficacy or safety. Please see each product’s respective prescribing information for additional information, including indication, dosing, administration, and safety. Trademarks are the property of their respective owners.

†Only limited benefit of premedication with corticosteroids, antihistamines, or acetaminophen was seen in RMS clinical studies.

## Important Safety Information (cont)

PML can result in death or severe disability. Tell your HCP right away if you have any new or worsening neurologic signs or symptoms. These may include weakness on one side of your body,

Please see full Important Safety Information [here](#).  
Click here for full [Prescribing Information](#)  
including [Medication Guide](#).

# B-cell Treatment Timing

Along with how treatments are taken, consider how long administration can take.

Administered yourself:		
KESIMPTA®	<1 min* auto-injection 3-4 secs avg injection time	1x monthly*
Administered by a health care provider:		
Ocrevus® (ocrelizumab)	2-4 hrs infusion	2x yearly
Ocrevus® Zunovo™ (ocrelizumab and hyaluronidase-ocsq)	10 mins injection	2x yearly
Briumvi® (ublituximab-xiyy)	1-4 hrs† infusion	2x yearly

This is not a complete list of all the available treatments for RMS.‡

\*Typical administration time when ready to inject. Once monthly after 3 weekly starter doses.

†The 1<sup>st</sup> infusion of Briumvi takes 4 hrs. Subsequent infusions take 1 hr.

‡The comparison pertains only to differences in dosing and administration and should not be considered a comparison of efficacy or safety. Please see each product's respective prescribing information for additional information, including indication, dosing, administration, and safety. Trademarks are the property of their respective owners.

## Important Safety Information (cont)

loss of coordination in arms and legs, vision problems, changes in thinking and memory, which may lead to confusion and personality changes.

Please see full Important Safety Information [here](#).  
Click here for full [Prescribing Information](#)  
including [Medication Guide](#).

## Q's for Your Doctor

# Wondering how treatments can fit into your life?

### Ask your doctor:

- ☐ What are the different treatment schedules for different therapies?
- ☐ What steps are involved on a typical treatment day for those therapies?
- ☐ Will I need to take time off work or other downtime for treatment?
- ☐ Could I travel with KESIMPTA®?  
Are there storage requirements?

Full checklist  
of questions

For adults only.

Chose KESIMPTA® as 1st treatment: 2022

**Considering  
Safety**

# Proven Safety Profile

**Because it's so important,  
the **safety of KESIMPTA®**  
continues to be studied:**

**Check out the safety details** 

\*KESIMPTA continues to be studied in an ongoing, open-label extension study. An open-label study is a type of study where participants are aware of the type of treatment they're being given. Interpreting results from open-label studies can be uncertain. They are not considered representative results, since participants chose whether to stay in the trial. After the original KESIMPTA studies, over 1700 people continued to participate for further evaluation, where they all took KESIMPTA. The goal of this extended study was to learn about the safety and tolerability of KESIMPTA in the long term, with a focus on injection-related reactions, malignancies, and serious infections for up to 6 years. No conclusions of clinical outcomes can be drawn. (September 25, 2023 data cut-off date.)

## Important Safety Information (cont)

- **Weakened immune system.** KESIMPTA taken before or after other medicines that weaken the immune system could increase your risk of getting infections.

**Please see full Important Safety Information [here](#).

with your decision?**

**Sign up** 

## **Important Safety Information (cont)**

- Have had a recent vaccination or are scheduled to receive any vaccinations.
  - You should receive any required 'live' or 'live-attenuated' vaccines at least 4 weeks before you start treatment with KESIMPTA.

**Please see full Important Safety Information [here](#).  
Click here for full [Prescribing Information](#)  
including [Medication Guide](#).**

## Indication

### What is KESIMPTA® (ofatumumab) injection?

KESIMPTA is a prescription medicine used to treat adults with relapsing forms of multiple sclerosis (MS) including clinically isolated syndrome (CIS), relapsing-remitting disease, and active secondary progressive disease.

It is not known if KESIMPTA is safe or effective in children.

## Important Safety Information

### Who should not take KESIMPTA?

Do NOT take KESIMPTA if you:

- have an active hepatitis B virus (HBV) infection.
- have had an allergic reaction to ofatumumab or life-threatening injection-related reaction to KESIMPTA.

### What is the most important information I should know about KESIMPTA?

KESIMPTA can cause serious side effects such as:

- **Infections.** Serious infections, which can be life-threatening or cause death, can happen during treatment with KESIMPTA. If you have an active infection, your health care provider (HCP) should delay your treatment with KESIMPTA until your infection is gone. KESIMPTA taken before or after other medicines that weaken the immune system may increase your risk of getting infections. Tell your HCP right away if you have any infections or get any symptoms including painful and frequent urination, nasal congestion, runny nose, sore throat, fever, chills, cough, or body aches.
- **HBV reactivation.** If you have ever had HBV infection, it may become active again during or after treatment with KESIMPTA (reactivation). If this happens, it may cause serious liver problems including liver failure or death. Before starting KESIMPTA, your HCP will do a blood test to check for HBV. They will also continue to monitor you during and after treatment with KESIMPTA for HBV. Tell your HCP right away if you get worsening tiredness or yellowing of your skin or the white part of your eyes.
- **Progressive Multifocal Leukoencephalopathy (PML).** PML may happen with KESIMPTA. PML is a rare, serious brain infection caused by a virus that may get worse over days or weeks. PML can result in death or severe disability. Tell your HCP right away if you have any new or worsening neurologic signs or symptoms. These may include weakness on one side of your body, loss of coordination in arms and legs, vision problems, changes in thinking and memory, which may lead to confusion and personality changes.
- **Weakened immune system.** KESIMPTA taken before or after other medicines that weaken the immune system could increase your risk of getting infections.

### Before you take KESIMPTA, tell your HCP about all your medical conditions, including if you:

- Have or think you have an infection including HBV or PML.
- Have ever taken, currently take, or plan to take medicines that affect your immune system. These medicines could increase your risk of getting an infection.
- Have had a recent vaccination or are scheduled to receive any vaccinations.
  - You should receive any required 'live' or 'live-attenuated' vaccines at least 4 weeks before you start treatment with KESIMPTA. You should not receive 'live' or 'live-attenuated' vaccines while you are being treated with KESIMPTA and until your HCP tells you that your immune system is no longer weakened.
  - Whenever possible, you should receive any 'non-live' vaccines at least 2 weeks before you start treatment with KESIMPTA.
  - Talk to your HCP about vaccinations for your baby if you used KESIMPTA during your pregnancy.
- Are pregnant, think that you might be pregnant, or plan to become pregnant. It is not known if KESIMPTA will harm your unborn baby. Females who can become pregnant should use birth control (contraception) during treatment with KESIMPTA and for 6 months after your last treatment. Talk with your HCP about what birth control method is right for you during this time.
- Are breastfeeding or plan to breastfeed. It is not known if KESIMPTA passes into your breast milk. Talk to your HCP about the best way to feed your baby if you take KESIMPTA.

**Tell your HCP about all the medicines you take,** including prescription and over-the-counter medicines, vitamins, and herbal supplements.

### How should I use KESIMPTA?

**See the detailed Instructions for Use that comes with KESIMPTA for information about how to prepare and inject a dose of KESIMPTA and how to properly throw away (dispose of) used KESIMPTA Sensoready pens or prefilled syringes.**

- Use KESIMPTA exactly as your HCP tells you to use it.
- Your HCP will show you how to prepare and inject KESIMPTA the right way before you use it for the first time.
- **Do not** inject into areas where the skin is tender, bruised, red, scaly or hard. Avoid areas with moles, scars, or stretch marks.

### KESIMPTA may cause serious side effects including:

- **Injection-related reactions.** Injection-related reactions are a common side effect of KESIMPTA. Injecting KESIMPTA can cause injection-related reactions that can happen within 24 hours (1 day) following the first injections and with later injections. There are two kinds of reactions:
  - **at or near the injection site:** redness of the skin, swelling, itching, and pain. Talk to your HCP if you have any of these signs and symptoms.
  - **that may happen when certain substances are released in your body:** fever, headache, pain in the muscles, chills, tiredness, rash, hives, trouble breathing, swelling of the face, eyelids, lips, mouth, tongue and throat, and feeling faint, or chest tightness. Contact your HCP right away if you experience any of these signs and symptoms, especially if they become worse or you have new severe signs of reactions after subsequent injections. It could be a sign of an allergic reaction, which can be serious.
- **Low immunoglobulins.** KESIMPTA may cause a decrease in some types of antibodies. Your HCP will do blood tests to check your blood immunoglobulin levels.

### The most common side effects of KESIMPTA include:

- Upper respiratory tract infection, with symptoms such as sore throat and runny nose, and headache.
- Headache.

You are encouraged to report negative side effects of prescription drugs to the FDA. Visit [www.fda.gov/medwatch](http://www.fda.gov/medwatch), or call 1-800-FDA-1088.
